

Founder QA Checklist — Engagement Sample 1

Use this checklist to sign off that engineering output matches the design reference before scaling the template catalog.

Golden reference: Sample Engagement Invitation 1.mp4 (repository root)

Design spec: Engagement Sample 1 Timeline and Animation Details.docx

How to compare

1. Export a test MP4 from staging with **sample customer text** (same strings used in the reference, or agreed test names).
2. Open reference and export side-by-side in a player that supports **frame stepping** (VLC: shortcut E for frame forward).
3. At each checkpoint below, pause both videos at the **same timestamp** and verify:
 - Text position (within ~2px at 1080p equivalent)
 - Font family and weight
 - Which letters/glyphs are visible (writing reveal progress)
 - Opacity and motion direction (fade, skate RTL, burst)

Checkpoint timestamps (seconds)

Time (s)	What to verify
0–6	No editable overlay; matches baked intro only
6.0	Partner 1 enter begins — invisible before this
~7–8	Partner 1 writing reveal mid-progress
~9–10	Partner 1 static / Partner 2 enter (Partner 2 same window as Partner 1 per spec)
11–12	Page 2 exits
12.0	Page 3 large names enter (Fade 15%)
14–16	Parent names — Skate RTL motion visible
17–18	Page 3 exits

18.0	Date fields — Burst enter
20–22	Venue and time fields visible with burst/writing
23–24	End state matches reference

Animation-specific checks

fade_writing_element

- ☐ Text not visible before enter start
- ☐ Letters/elements appear progressively, not all at once
- ☐ Exit mirrors enter (where design specifies enter+exit)

skate_writing_rtl

- ☐ Horizontal motion right-to-left during reveal
- ☐ ~50% speed feel vs default fade layers (per design doc)

burst_writing_enter

- ☐ Pop/burst per letter on enter
- ☐ No exit animation on date/venue fields (enter-only)

Language checks

- ☐ Hindi (Devanagari) sample text shapes correctly — no tofu squares
- ☐ English sample text matches reference spacing
- ☐ Empty fields omitted in export (no placeholder boxes)

Export quality checks

- ☐ 1080p export matches preview timing
- ☐ 4K export: same motion timing, sharper text (scaled positions)
- ☐ Audio present and synced with background video

Sign-off

Field	Value
Build / commit tested	Founder
Tester	
Date	
Result	Pass / Fail
Notes	

Pass = acceptable to publish Engagement Sample 1 to paying customers.

Fail = log timestamp + layer name; return to engineering with screenshot or frame grab.
